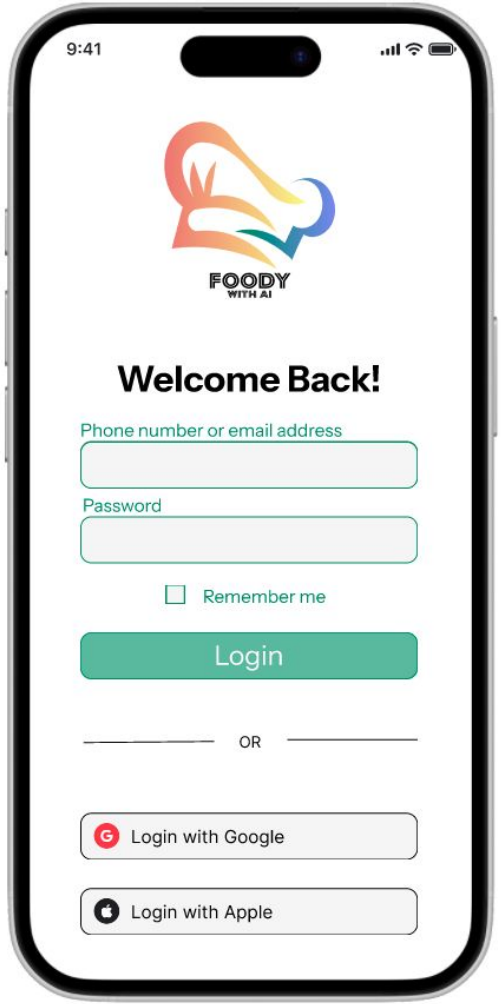
Section 4 Summary

Introduction

Foody with AI

This app is designed for food lovers. It allows users to share their own recipes, connect with others who share similar interests, and provides a helpful space for individuals with food allergies or specific dietary needs to find and share tailored food ideas. Users also receive personalized weekly meal suggestions from AI, making meal planning simpler.

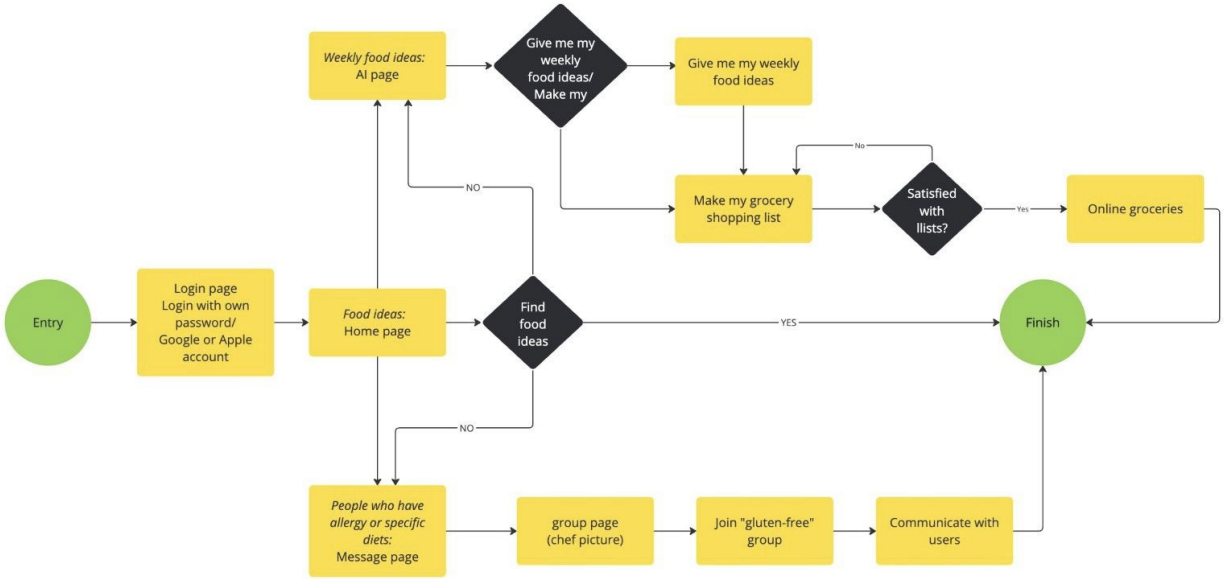
It's created to make cooking and meal planning enjoyable and accessible for everyone.



User Flow Diagram

Original User Flow

1. Food ideas
2. Weekly food ideas
3. People who have allergy or specific diets



Food ideas

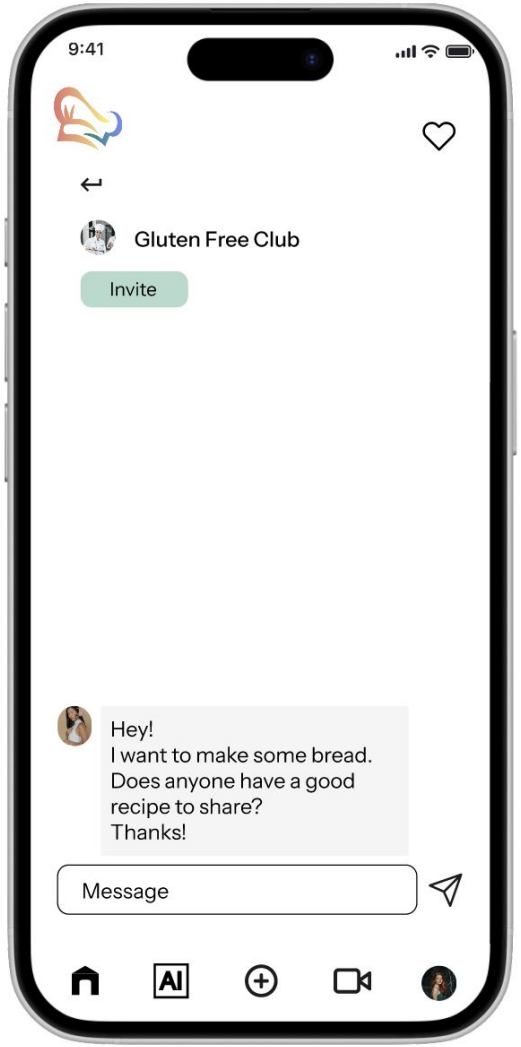
1. Login
2. Display home screen
3. Find food ideas
4. Finish

Weekly food ideas

1. Login
2. Click “AI” button
3. Click “Give me a weekly food idea” button
4. AI suggests food ideas
5. Click and check the recipes
6. Finish

People who have allergy or specific diets

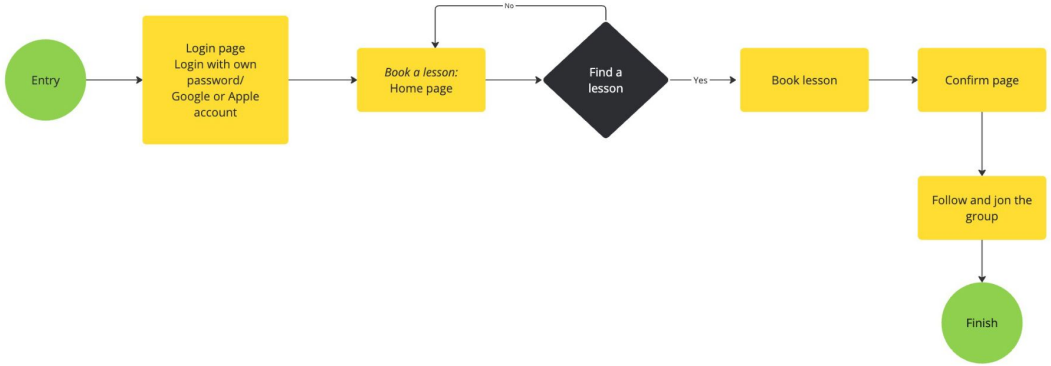
1. Login
2. Click paper airplane button (top right of screen
3. Click the “chef picture”
4. Display i.e. gluten-free group’s message
5. Communicate with people who have similar diets
6. Finish



New User Flow

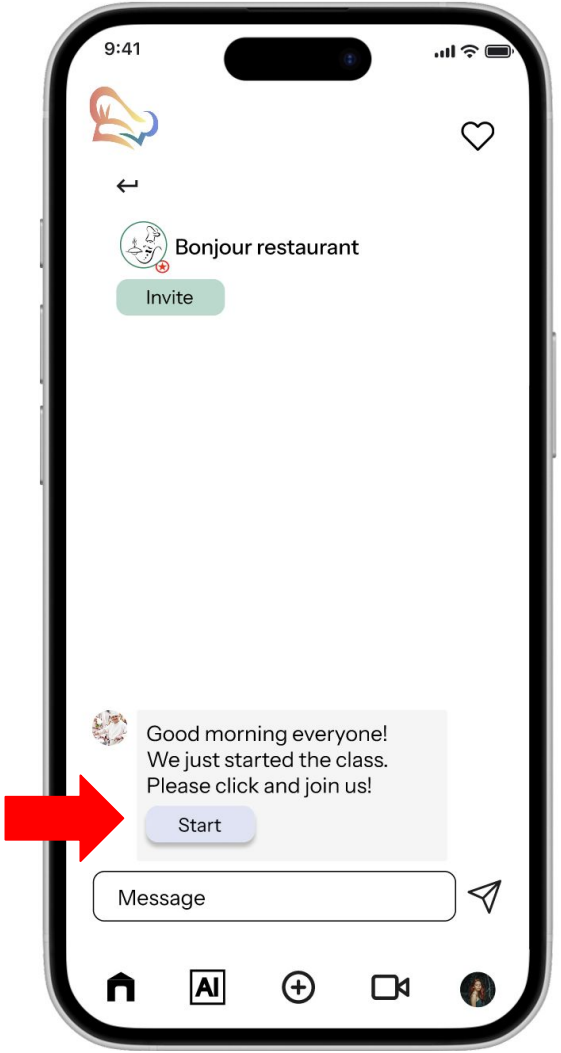
1. Paid cooking classes

   Paid community and chefs; food advisors or people who have special needs can create a group and provide paid online classes or seminars



Taking cooking classes

1. Login
2. Display home screen
3. Find lesson (official accounts have a red star mark)
4. Click the “Book Now” button
5. Register the class
6. Display confirmation page
7. Follow the user and join the lesson
8. Finish



Testing method

Survey

I conducted a survey using Jotform to understand users' interest in food and their willingness to spend on activities such as searching for recipes, cooking classes, and exploring new food-related experiences.

Goals

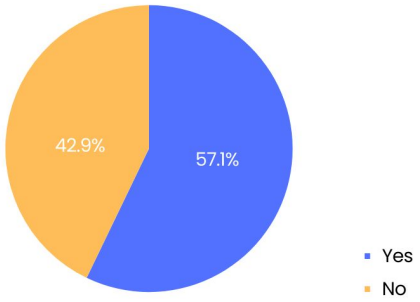
To understand how many users are interested in **spending money** for:

- Food ideas
- Food-related professions or knowledge (e.g., recipes, cooking tips, dietary expertise)

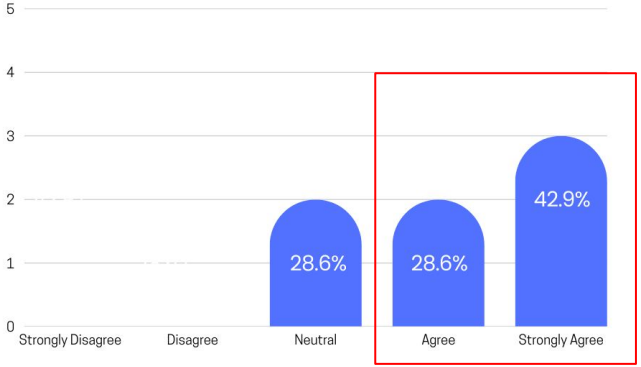
Survey

How often do you research food recipes?

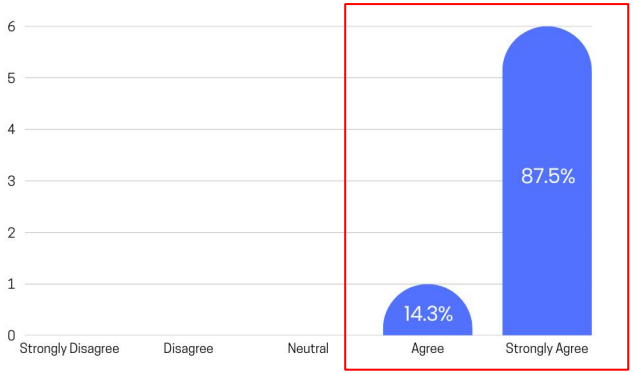
Have you ever taken paid cooking classes or bought a recipe book?



I am interested in food-related professions or knowledge (e.g., Cook, Food Stylist, Diet Counselor, Food Safety Manager, etc.).



I am interested in trying new recipes.



Survey

Findings

Regardless of age or gender, over 70% of people cook at least once a week. More than half have previously spent money on food-related matters. Furthermore, nearly everyone expressed interest in discovering new food knowledge and recipes. Additionally, many people are interested in new recipes and food knowledge, and they gather information through books, the internet, social media, and cooking classes.

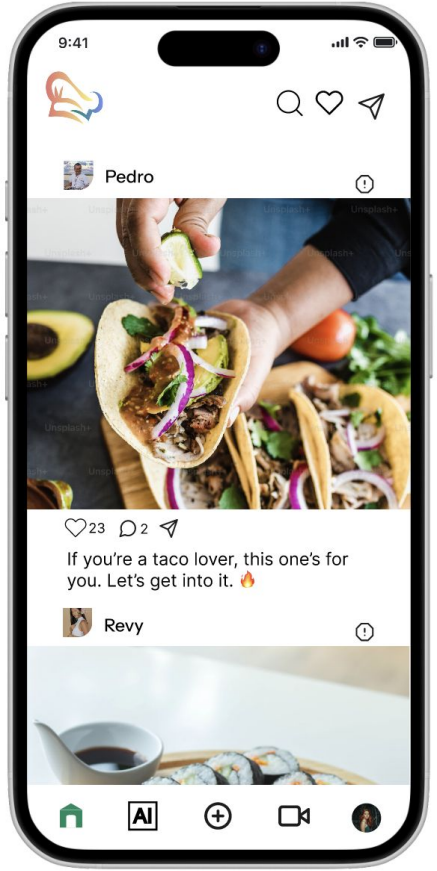
Insights

Based on these results, it is clear that offering easily accessible and informative cooking classes would be beneficial for people, suggesting an ideal opportunity to provide a premium channel to connect food professionals and educators with interested users.

Survey

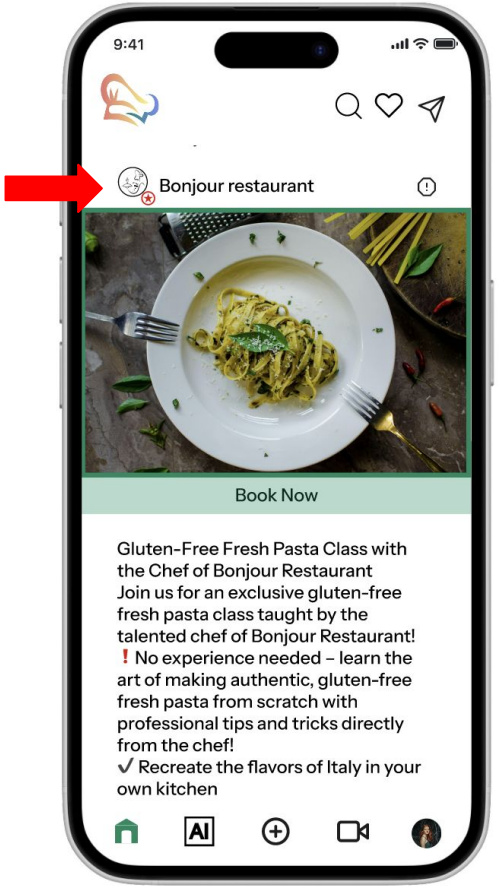
URL: [Foody with AI app]

Before



Users with a red star icon are providing paid classes. Users can find new paid classes easily and continue to registration by clicking the user icon

After



Preference Tests (visuals & typography)

I conducted two preference tests using Lyssna to explore users' preferences in visual design elements for the app, such as icon style, typography, and layout.

Goals

- To understand what kinds of icon shapes are attractive
- Identify which typeface is easiest to read
- Determine whether users can recognize the meaning from the icons alone

Typography

Option #1

🤯 Homemade Italian Bolognese Alert! 🤯
I just made the most delicious Italian Bolognese 😋🍝 and here's my recipe!
Recipe:
Ingredients (Serves 4)
- 250g ground beef
- 250g ground pork
- 1 onion (finely chopped)
- 2 garlic cloves (minced)
- 1 celery stalk (finely chopped)
- 1 carrot (finely chopped)
- 2 tbsp tomato paste
- 400g canned whole tomatoes (crushed)
- 100ml red wine
- 100ml milk
- 2 tbsp olive oil
- Salt and black pepper to taste
- Dried herbs (oregano, basil, etc.)
- Pasta (spaghetti, fettuccine, or your choice)
- Parmesan cheese (optional, for garnish)

Instructions:
1. Heat olive oil: In a large skillet, heat olive oil and sauté the onion, garlic, celery, and carrot

Option #2

🤯 Homemade Italian Bolognese Alert! 🤯
I just made the most delicious Italian Bolognese 😋🍝 and here's my recipe!
Recipe:
Ingredients (Serves 4)
- 250g ground beef
- 250g ground pork
- 1 onion (finely chopped)
- 2 garlic cloves (minced)
- 1 celery stalk (finely chopped)
- 1 carrot (finely chopped)
- 2 tbsp tomato paste
- 400g canned whole tomatoes (crushed)
- 100ml red wine

Two Preference Tests (visuals & typography)

Findings

According to the results, 70% of users preferred a robotic-style typeface for usernames, while 60% said that a clean and readable font is better for longer text. In terms of visuals, 60% responded that they preferred icons with a paper-like appearance, and 50% were able to recognize the edit button based on the icon alone.

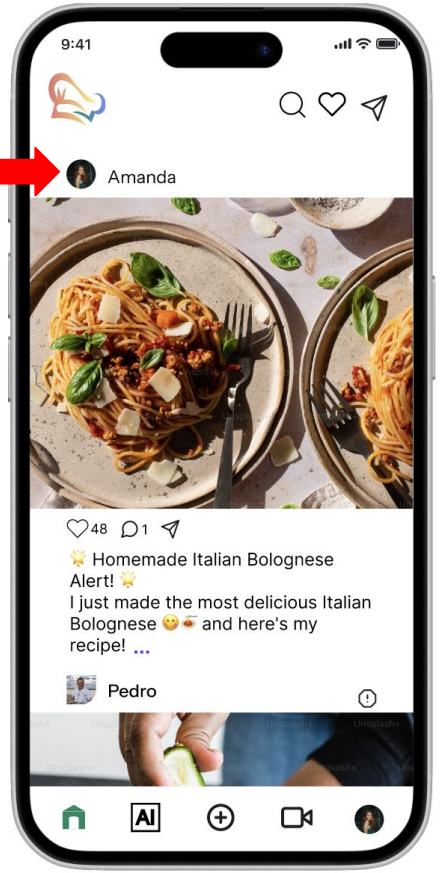
Insights

As a result, it seems that icons and usernames with a touch of fun or playfulness are more attractive and may create a sense of excitement for users. However, for longer text, familiar and commonly seen fonts are easier to read and feel more approachable. Using icons instead of text can enable smoother user interaction by tapping into people’s automatic, instinctive thinking.

Two Preference Tests

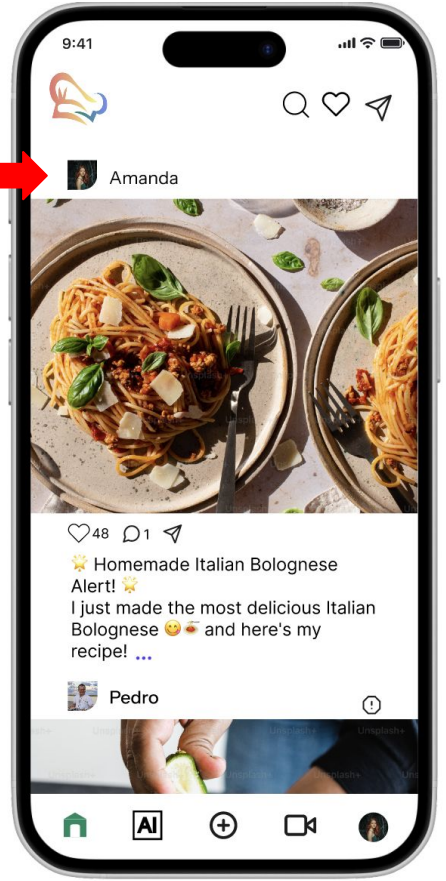
URL: Foody with AI app

Before



Using paper-like icons, such as a recipe book, can help create a unique and fun experience for users

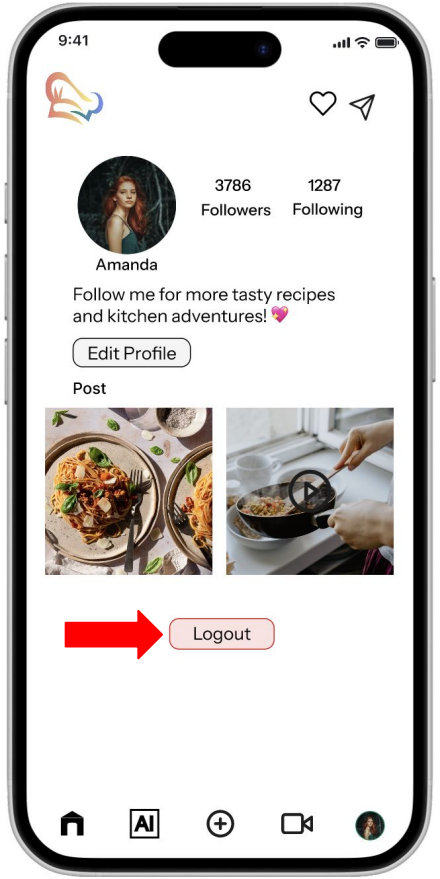
After



Two Preference Tests

URL: Foody with AI app

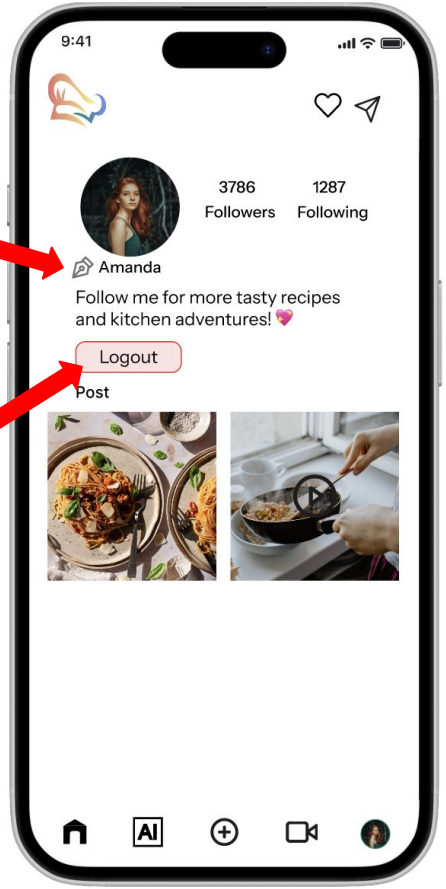
Before



Using icons instead of text makes the interface look simpler and helps users find what they need more easily

Placing the logout button near the edit icon makes both buttons easier to find and creates a more organized layout

After



Unmoderated User Test with Maze

I conducted an unmoderated user test using Maze to understand users' behavior and how they interact with the app’s visual design and layout.

Goals

To assess whether the app is easy to use and if users can effectively achieve their goals:

- Simple organization
- Clear hierarchy

Unmoderated User Test with Maze

Task 1: Go to the home page and register for a paid class

Register a paid class

Prototype Test

Unmoderated User Test with Maze

Unmoderated User Test with Maze

Findings

According to the results, 50% of users were able to complete the class registration, while the other half could not. Over 80% of users achieved their goals, but more than 50% experienced misclicks. 50% found the process easy, while 17% reported that it was difficult.

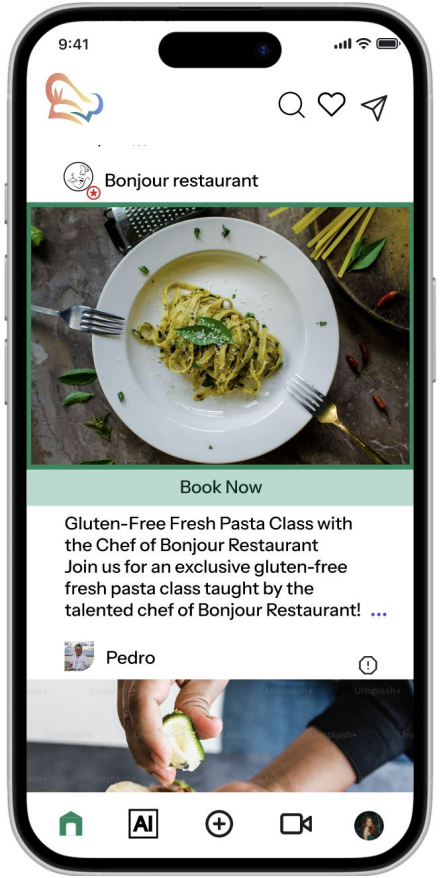
Insights

From these results, it became clear that finding paid classes is difficult, so improvements to make them more prominent are necessary. Additionally, since more than 50% of users experienced misscliks, there is a need to improve the navigation for better clarity.

Unmoderated User Test with Maze

URL: [Foody with AI app]

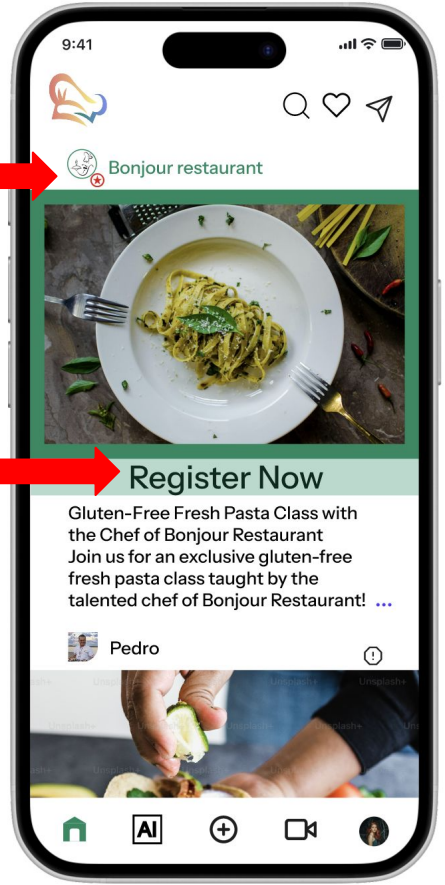
Before



Using different colors for normal users and official users makes it easy to distinguish between the two

Using larger text, it becomes more noticeable

After



2nd Moderated Usability Testing Session with Script

I conducted a moderated test using Microsoft Teams to better understand how users interact with the app, their thought processes, and how they make decisions.

Goals

To assess whether the app is easy to use and if users can effectively achieve their goals:

- Better organization
- Clear hierarchy

2nd Moderated Usability Testing Session with Script

The app is easy to navigate.
Rate 1- 5 / 1 for disagree 5 for agree

4

The app is unnecessarily complex.
Rate 1- 5 / 1 for disagree 5 for agree

3

Success rate

100%

2nd Moderated Usability Testing Session with Script

Findings

According to the results, 100% of users were able to complete their tasks, although some misclicks were observed. In the statement-based feedback, where users selected from 1 to 5 (ranging from 'strongly disagree' to 'strongly agree'), the average rating for 'easy to navigate' was 4, while 'unnecessarily complex' received an average of 3.

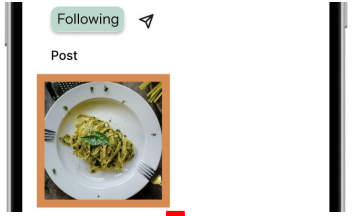
Insights

From these results, it’s clear that the visibility of paid classes needs improvement, and users found it difficult to understand when or how the class starts.

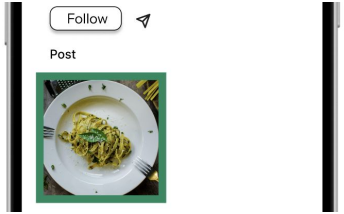
2nd Moderated Usability Testing Session with Script

URL: [Foody with AI app]

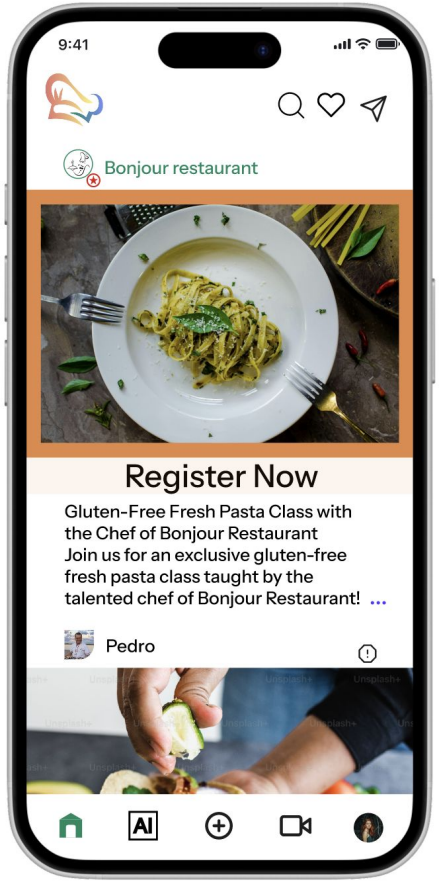
Before registering



After registering

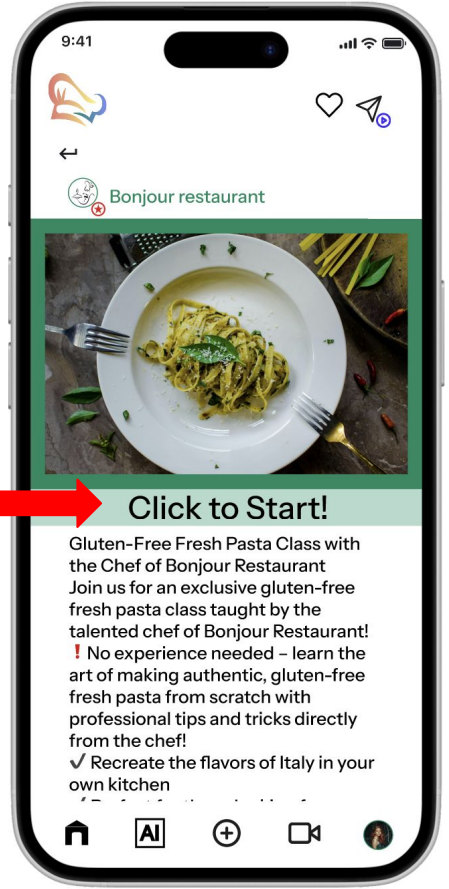


Before



After registering, the orange outline changes to green, making it easy for users to understand whether they have access to the task or not

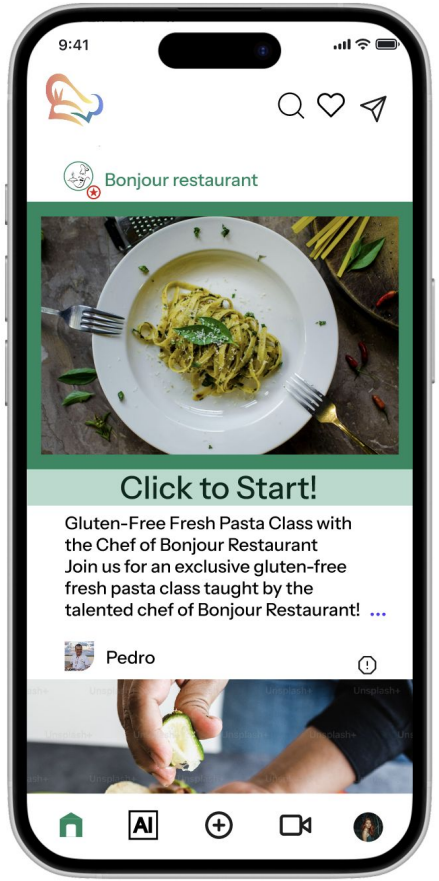
After



2nd Moderated Usability Testing Session with Script

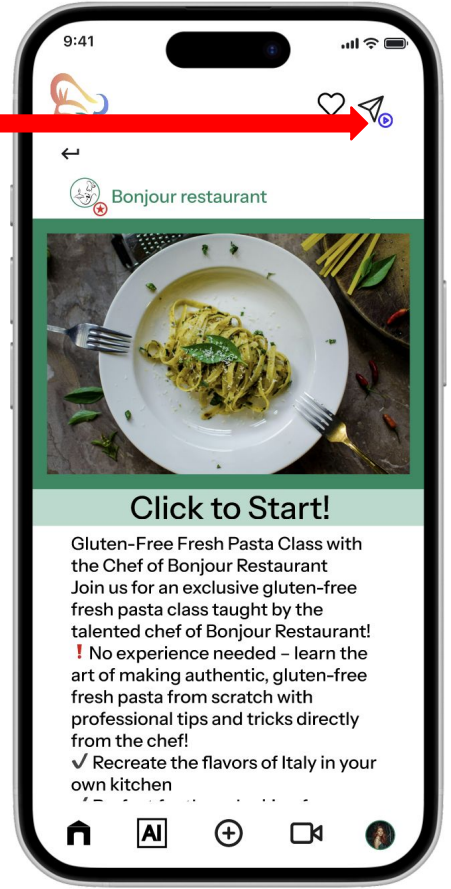
URL: [Foody with AI app]

Before



After registering, a small play icon appears, making it easier for users to recognize that the class has started

After



Summary and Next Steps

Summary

Survey

Recognizing user needs and identifying what features or content are most helpful to them:

Created a channel with paid cooking classes for users to enjoy learning new skills and knowledge.

Preference test

Exploring users' visual preferences for the app, such as icons and typography:

Created a unique icon shape and added subtle elements of excitement for users. Provided clear organization and structure.

Unmoderated test

Understanding users' behavior and how they interact with the app's visual design:

Used larger text and added stand out design elements such as an extra outline, improving visibility.

Moderated test

Communicating with users and ensuring the app has clear organization:

Used different colors making it easier for users to find what they need and helping users navigate more easily.

Next steps

1

Creating a cleaner organization and hierarchy so users can feel more confident using the app

2

Continuing to improve the paid class feature increasing visibility and accessibility of registered classes

3

Refining use of tests and surveys to better understand problem areas in users flows
